

EFFECTIVE TEACHING STRATEGIES FOR INCREASING KNOWLEDGE

Eshonqulova Dilso'z Muxtorqulovna

Master of Jizzakh state pedagogical institute

Abstract: Teaching strategies include all approaches for the teacher to actively involve students in the learning process. These strategies guide the teacher's instruction as they aim to achieve specific learning goals and provide their students with the tools they need to succeed.

Key words: teaching, strategy, knowledge, effective, role, engage

The most effective teaching strategies address all learning styles and the developmental needs of all students. Teachers must have a full arsenal of effective teaching strategies to maximize their effectiveness and maximize student learning. Teachers are better at their jobs when they use a variety of teaching strategies, not just one or two. Variety ensures that students are never bored and learn better. It also ensures that students are exposed to strategies that match their preferred individual styles. Teaching students different teaching strategies is fun and likely to stick around. Ultimately, the teacher must match the instructional strategies they use with the students they serve and the content they teach. Not all teaching strategies are perfect for every situation, so teachers must be experts in evaluating which strategies are most appropriate.

Popular strategies include reading, cooperative learning, hands-on learning activities, scaffolding, group instruction, self-assessment, thematic instruction, and word walls. New learning strategies are developed and implemented in classrooms almost every day depending on the students' response to them.

Teaching strategies can also be fully customized, meaning they can be adjusted and adjusted to fit any situation. Two teachers may use the same instructional strategy in completely different ways based on their individual preferences and needs. Teachers should put their own creative spin on these

methodological strategies to make them their own and to suit the interests of the student body.

Teaching strategies provide a mechanism for delivering great content. Teaching strategies - what they are and what the content is. In many cases, how you present your content is more important than what you present. Students paste content that is attractively and attractively packaged. A lack of a great delivery system can make even the most interesting content fail to connect.

The teachers' role is to make or create the conditions where the students can feel the leadership, knowledge, competency and understanding that is grown around them. Using drama as a teaching method is one of the teaching strategies that teachers can use in order to deliver the material to the learners. Drama in teaching, also called drama education, is different with drama on stage or drama performance. Drama education is done in the classroom and integrates with the lesson plan. In English Language Teaching, the drama education method can apply as a vehicle to help learners learn actively to use English in the classroom and make it relatable to real life. In using drama as a teaching method, it works on several dramatic conventions, including voice work, image theatre, and process drama strategies.

Instructional strategies give teachers the flexibility to meet individual learning needs. The myriad of instructional strategies available to the teacher provide flexibility to differentiate instruction. What is good for one group of learners is not necessarily good for another. Teachers must adapt to each group and use several teaching strategies to improve their effectiveness.

Teaching strategies can make teaching and learning fun. Most students learn best through fun and active learning opportunities. Many teaching strategies incorporate this and have components that make learning fun and engaging. Teachers should do their best to provide instructional strategies that keep students engaged, alert, and eager for more.

Teaching strategies, when used correctly, prevent students from becoming bored with how they learn. When the teacher uses the same strategy over and over again, it becomes boring for the students. This is a great way for students to lose focus and lose interest in learning. When the teacher varies the activities, varies them, and uses a wide range of learning strategies, the students stay engaged. This will ultimately help them learn more and improve their knowledge.

Teaching strategies improve teaching and encourage learning. Something beautiful happens when teachers are constantly learning and adjusting their teaching systems. Over time, they become more effective in not only finding great learning strategies, but also implementing them in their classrooms. Likewise, when students are exposed to different instructional strategies, it broadens the scope of how they learn, essentially giving them multiple ways to process and learn new information.
